

SIMUSERV GmbH - The Art of Simulation

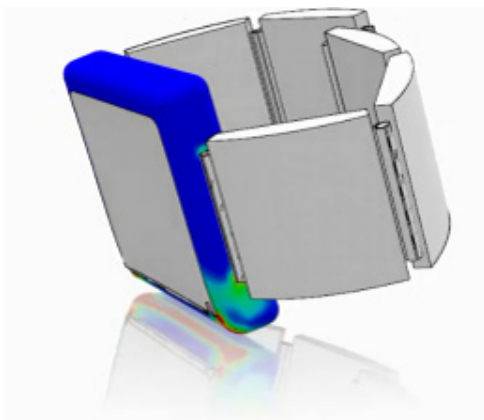

Multiphysics Package RENT

Digital product development with CST and Abaqus for the high-tech industry

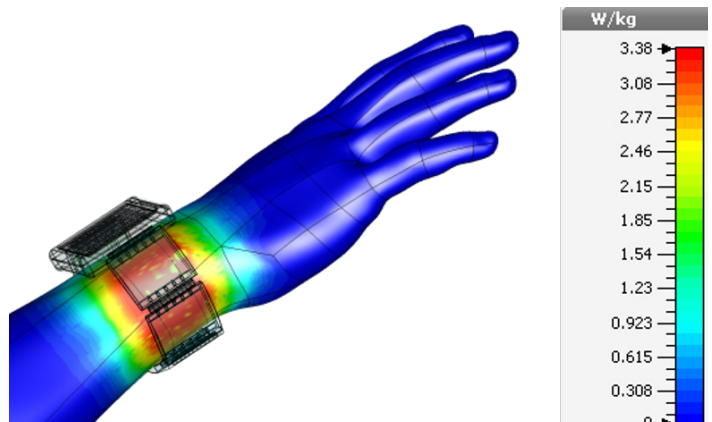

The two market-leading CAE software solutions for electromagnetics and structural mechanics have significant advantages in product development efficiency, time-to-market and cost reduction. By using digital twins, you can reduce outdated analog procedures such as drop tests or lengthy trial and error test cycles.

Multiphysics Package RENT for advanced numerical simulations

The package RENT is focused on customers who are already immersed in digital product development and who have a constant need for numerical simulations of medium complexity. With this Multiphysics Package you can use our software with your own hardware and you pay an annual rental license. In order to provide you with the best possible support, you will receive individual user training for CST Studio Suite and Abaqus, as well as four days of engineering advice on your issues.

Abaqus calculation of structural mechanics:
Drop test Smart watch

CST calculation EMAG:
Antenna radiation Smart watch

Advantages of Multiphysics Package RENT

- Ideal for constant need with medium demand
- On premise usage with own hardware
- Annual rental license fee
- Individual user training for CST and ABAQUS
- 4 days of engineering support on problems
- Enables several product variations per week
- Starts at 30k€/year
